Beta is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus MSM 30 Index for the companies which have a minimum trading history of 1 year. Low Beta is mainly due to light trading activities as most of the stocks that have relatively low beta are rarely traded in the market.
