Notes: NM: Not Meaningful. NA: Not Applicable. P/E is calculated based on TTM-1Q2014 net profit and current prices. Trailing P/BV is based on 31-March-2014 shareholders' equity and current prices. Dividend Yield is based on FY2013 cash dividends and & current prices. Dividend Yield for companies that did not yet hold their AGM is based on FY2012 cash dividends and current market cap. Valuation multiples for companies that have not yet disclosed their 1Q-2014 financials are still based on FY13 net profit and shareholders' equity as of 31-December-13. DTD: daily change. MTD: Beginning of Current Month to Date, YTD: Beginning of Year to Date. SAR: Saudi Riyal. * Companies that vary in their fiscal years are treated separately to adjust for recent results announcements. DTD % change for individual stocks is based on the change in last traded price as being provided by Saudi Tadawul. DTD % change in sectors and market is based on the daily change in market capitalization (market capitalization is calculated based on the last traded price) which might not conform with the benchmark return. DTD change in market cap might not match that of the TASI as the index calculation is based on floating shares in the market. ** Turnover is calculated based on free floating capital and updated on monthly basis.

Beta is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus TASI for the companies which have a minimum trading history of 1 year.
