#### Notes:

NM: Not Meaningful. NA: Not Available. Trailing P/E is calculated on the earnings for TTM 1H-12 and current prices. Trailing P/B is based on 30 -June-2012 equity and current prices. Current Yield for individual stocks is based FY 2011 DPS & current prices. Valuation multiples for companies that have not yet disclosed their financials for 1H-12 are still based on the earnings for Q1-12 and equity as of 31-Mar-12. DTD:daily change. MTD: Beginning of Current Month to Date YTD: Beginning of Year to Date. BD:Bahraini Dinar. \* Companies that vary in their fiscal years are treated separately to adjust for recent results announcements. DTD % change in sectors and total market is based on the daily change in market capitalization which might not conform with the benchmark return.

**We have excluded the net losses incurred by Gulf Finance House while calculating the Price-to-Earnings Multiple (P/E) for the aggregate market and its respective sector.**

**Beta** is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus BB General Index for the companies which have a minimum trading history of 1 year. Low Beta is mainly due to light trading activities as most of the stocks that have relatively low beta are rarely traded in the market.
